

Repeating Defects

Xerox® Altalink® C8230/C8235/C8245/C8255/C8270 Color Multifunction Printer

3759L

To identify the component causing the defect, compare your print sample against the measurements shown.

To diagnose a defect on the transfer belt:

1. Print eight Letter/A4-size pages long-edge feed. Verify that the same defect appears on every fourth page.
 - Or
 2. Print four Tabloid/A3-size pages. Verify that the same defect appears on every other page.
- Call for service for this defect.

the 1990s, the number of publications on the topic has increased. The number of publications in the field of research on the effects of the environment on human health has increased from 10 in 1980 to 100 in 1999.

There are a number of reasons for this increase. One of the reasons is that the public is becoming more aware of the risks of environmental pollution. Another reason is that the scientific community is becoming more interested in the topic. Finally, the government is becoming more involved in the field of environmental health.

The increase in research on the effects of the environment on human health is a positive development. It will help us to better understand the risks of environmental pollution and to develop strategies to reduce these risks.

There are a number of challenges that we face in the field of environmental health. One of the challenges is that the scientific community is still relatively young. Another challenge is that the government is still relatively inexperienced in the field of environmental health.

Despite these challenges, the field of environmental health is a promising one. It has the potential to make a significant contribution to the health and well-being of the population.

There are a number of areas where research is needed. One of the areas is the development of better methods for assessing the risks of environmental pollution. Another area is the development of better strategies for reducing these risks.

The field of environmental health is a complex one. It involves a number of different disciplines, including toxicology, epidemiology, and public health. It is a field that is constantly evolving and that has the potential to make a significant contribution to the health and well-being of the population.

There are a number of things that we can do to improve the field of environmental health. One of the things is to increase the number of researchers in the field. Another thing is to increase the funding for research in the field.

The field of environmental health is a field that is full of potential. It is a field that has the potential to make a significant contribution to the health and well-being of the population.

There are a number of things that we can do to improve the field of environmental health. One of the things is to increase the number of researchers in the field. Another thing is to increase the funding for research in the field.
