

Print Quality Test Pages

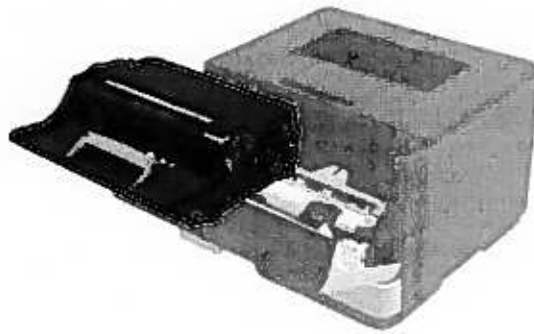

Using the Print Quality Test Pages

The Print Quality Test Pages are used to identify and correct print quality defects.

The following pages were printed using the factory default settings. Use plain paper when printing the pages.

Always perform the following checks for any print quality problem:

- Make sure that you are using genuine supplies and not third-party supplies.
- Make sure that the paper type settings match the paper loaded in the tray.
- Remove the supplies, and then **reinstall the imaging unit** properly to ensure good connection.
