Print-Quality Settings

The Print-Quality mode and Color Corrections options directly control the quality of your prints. You can change these settings in the print driver. Select the setting that is best suited for your print job.

Print-Quality Mode

- **Enhanced** mode is the general-purpose mode for crisp, bright color prints. Enhanced mode balances speed with quality.
- **High Resolution** mode is a high-quality mode that creates fine lines and detail. High Resolution mode is recommended for vibrant, saturated color prints. High Resolution mode balances quality over speed.
- **Toner Saver** mode reduces the amount of toner used for print jobs and is useful for draft-quality output. Print quality is slightly lower than using Standard mode.

Color Corrections

Color corrections are available on the Image Options tab in the print driver. The Preview window appears on the right side of the Image Options tab. When the Preview check box is selected, color correction appears in the Preview window. Selecting and clearing the Preview check box allows you to compare the corrected image to the uncorrected image.

To adjust the color characteristics of your print job, select the Color Correction tab, then select options as needed.

- **Xerox Black and White Conversion** converts the colors to grayscale, producing a black and white print job. This setting is useful for creating black and white master documents for photocopying or faxing.
- **Color Correction** provides options to match the printer colors as closely as possible to colors on other devices, such as your computer screen or a printing press.
 - **Automatic** applies the best color correction to each graphic element of the document: text, artwork, and photographs.
 - **Simulate LCD Display** approximates the print job color to the colors on a LCD computer monitor.
 - **sRGB Display** approximates the print job color to an RGB (red, green, blue) display.
 - **None** removes all color correction. This option is the best choice when working with color specified within your application or operating system.
- **Xerox Automatic Color** applies the best color correction to each graphic element of the document, including text, artwork, and photographs.
- **Custom Automatic Color** provides more options for customizing colors in your print job. Use one selection to adjust the color of the text and graphics. Use the other selection to adjust the color correction applied to images. You can apply a wide range of color options to each element to simulate the outputs of different color devices.

To adjust colors using descriptive phrases, select the **Color By Words** tab. From the menus, select the phrases to build a sentence that describes the color adjustment that you want. You can build more than one sentence for the print job, affecting one color or an entire range of colors.

To change settings for each individual color parameter, select the **Color Adjustments** tab, then adjust the sliders. The sliders allow you to select a continuous range of adjustment for each of the following:

- Lightness
- Contrast
- Saturation
- Cyan to Red
- Magenta to Green
- Yellow to Blue
